

Creator: Create and Delete Card Use Case

Creator logs in and creates a card, "Card A", then decides to delete "Card A".

Creator also creates another card, "Card B".

Creator logs out.

Admin: Review and Manage Content Use Case:

Admin logs in and reviews the cards submitted.

Admin approves "Card B".

Admin identifies an inactive or problematic account and deletes it.

Admin logs out.

User: Interact with Cards Use Case:

User logs in and begins swiping through a bucket of cards.

User accidentally adds an unwanted card to their bucket and removes it.

User continues to swipe until they find "Card B" and interact with it.

User logs out.

Use Case Scenario: Card Creation and Interaction Platform

System Actors:

Creator: Users who create content in the form of cards.

Admin: Users with administrative privileges to manage content and user accounts.

User: End users who interact with cards.

Use Cases:

Creator Use Cases:

Create and Delete Card Use Case:

Primary Actor: Creator

Preconditions: Creator must be registered and logged into the system.

Main Flow:

Creator logs into the system.

Creator creates a new card named "Card A" with specific content.

Creator reviews "Card A" and decides to delete it.

Creator creates another card named "Card B" with different content.

Creator logs out.

Admin Use Cases:

Review and Manage Content Use Case:

Primary Actor: Admin

Preconditions: Admin must be logged into the system.

Main Flow:

Admin logs into the system.

Admin reviews newly created cards and accepts "Card B".

Admin identifies an inactive or problematic account and decides to delete it.

Admin logs out.

User Use Cases:

Card Interaction Use Case:

Primary Actor: User

Preconditions: User must be registered and logged into the system.

Main Flow:

User logs into the system.

User interacts with a series of cards by swiping through them in a "bucket".

User accidentally adds a card to their bucket but decides to remove the last added card.

User continues to swipe through cards until they find "Card B" and interact with it.

User logs out.

Postconditions:

Creator: "Card A" is deleted, and "Card B" is successfully created and left in the system for user interaction.

Admin: Successfully reviews and approves "Card B", deletes one problematic account.

User: Successfully interacts with the cards, particularly engaging with "Card B".

Exception Scenarios:

Creator cannot log in: If the Creator fails to log in, they cannot create or delete cards.

Admin finds no cards to review: If no cards are pending review, the Admin has no content-related tasks to perform.

User dislikes all cards: If the User dislikes all available cards, this may indicate a need for more varied or appealing content creation.
